Some of the samples in this catalog are artificial renderings. Specifications, design and dimensions stated in this catalog may be subject to change without notice (for technical improvements etc). The corporate names and merchandise names written in this catalog are the trademark or registered trademark of the respective corporations. Inkjet printers print using extremely fine dots, so colors may very slightly vary after replacement of the printing heads. Also note that if using multiple printer units, colors could vary slightly from one unit to other units due to slight individual differences. Please note that descriptions and data in this catalog are as of July 2022.

Wide-format Inkjet Printer for Solvent / Water-based Sublimation Inks

# JV300Plu5series JV300-130/160Plus

Large-format inkjet printer equipped with eco-solvent ink for signage market, which is a high-performance printer wherein environmental protection are achieved by means of additional ecology & economy as well as by work efficiency

# JV300-130/160Plus

Ecology Economy

Labor-saving process & Business efficiency

3 Plus

High image quality Stability

### Ecology & Economy are newly added features

### Adoption of Eco-cartridge

A new Mimaki Eco-cartridge(\*) has been adopted with a replaceable 600ml ink pack. The Eco-cartridge is a reusable plastic case with a 600ml ink pack that can be replaced by customers. Using the Eco-cartridge will reduce the disposal of plastic 440ml cartridge every time ink is replaced, leading to environmental protection. In addition, the increased ink capacity reduces the need for cartridge replacement and add labor-saving process & business efficiency. The 8 colors (C, M, Y, K, Lc, Lm, Lk, Or) of SS21 600ml ink pack are newly prepared for the Eco-cartridge application.

(\*) The Mimaki Eco-cartridge is only compatible with 600ml ink packs.

## Labor-saving process & Business efficiency are additional features

#### ID Cut is available!

- With the aid of Print & Cut, work efficiency of CG-FXII Plus Series (\*) can be improved -

When JV300-130/160 Plus is used in combination with the optionally available Cutting plotters CG-FXII Plus Series, such a newly added function as "ID Cut" can be used, enabling labor-saving and efficient cutting & printing operations to be performed with ease.

(\*) CG-FXII Plus Series : CG-75FXII Plus, CG-130FXII Plus, CG-160FXII Plus

#### What is ID Cut?

When the printing operation is performed using JV300-130/160 Plus and RL7, ID that has recorded cutting information as well as material rotation information is printed out simultaneously.

When the register mark sensor of CG-FXII Plus Series reads such ID, it

When the register mark sensor of CG-FXII Plus Series reads such ID, it asks the applicable PC to send cutting data information to it, and starts the cutting operation automatically by means of CG-FXII Plus Series. Since ID is printed out in four directions, a correct cutting operation will be performed because the machine recognizes an orientation of any media, regardless of orientation of such media.

It eliminates any cutting instruction for each data from PC, and prevents media loss due to data transmission mistake.

#### In the past...

Any operators scanned register marks and specified cut data after each cutting job was completed.

In the ID Cut function, even if there are a large number of types of cut data, any operator performs manual operation only once at first!

#### **Ethernet supported!**

- Support for Ethernet connection implements free and efficient work environment -

To the conventional connection method to PC for RIP, Ethernet connection has newly been added.

Unlike the conventional USB connection, connection via Ethernet can be established via network cable, and thus connection to a printer from any PC within network is now available. More free and efficient work-site environment can be put in place, by editing data using any PC in your office, then sending print data directly to a printer in your work operation site, for example.

#### Newly added functions to support higher image quality and stability

#### MAPS4

In ordinary textile printers, the straight pass boundaries often results in bandings and discoloration due to slight misalignment. The "MAPS4 (Mimaki Advanced Pass System 4)" functionality provides gradation to printed pass boundaries and reduces banding and uneven color, achieving a beautiful printing result.

Banding occurs at pass boundaries. Image quality is damaged seriously because horizontal streaks and uneven color printing are brought about.

Because printing pass boundaries are faded in gradation, a beautiful image quality is ensured by reducing banding and uneven color.

#### Adoption of newly designed feeding & winding mechanism

- "End-face guide" for maximum loadable media in weight (45kg) comes equipped with as standard

Through renewal of the older feeding & winding mechanism, stability of media conveyance has been improved, and thus the maximum loadable media weight has changed from 40kg to 45kg, making longer-sheet printout available. Also, it is provided with such an end-face guide as standard that prevents edge-surface meandering when any media are wound up, supporting high-quality printout through stable winding.

#### Our original and patented technology

#### Mimaki's original 3-way intelligent heater

This 3-way intelligent heater fixes ink droplets placed on media in position. While temperature is controlled with Mimaki's original technology, heat is applied to media, and ink droplets are fixed in position with excellent color development and high-quality image being maintained. It achieves both stable color development and easy handling after output.

- · Pre-heater: Heats media to optimum temperature before printing
- Print heater: Dries ink droplets placed on media prior to ink bleeding, improving color development
- · Post-heater: Accelerates ink drying, realizing a stable winding
- · Top blower: Provides air blow to support ink drying
